## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

**Group I**, claim(s) 1-24, drawn to a process for purifying alpha-1 proteinase inhibitor (API) from an unpurified mixture of proteins.

**Group II**, claim(s) 25-39, drawn to a purified active API produced by a specific process.

The technical feature that links the invention in group I and II is the purified alpha-1 proteinase inhibitor (API). However the prior art Lebing et al (US 6,462,180 B1) teaches a purification method that results in the alpha-1 proteinase inhibitor (API) disclosed in the instant invention. As no difference can be attributed to the purified AP1 of Lebing et al and the AP1 in the instant application, the technical feature linking the inventions in groups I-II is not a special technical feature given that unity of invention is fulfilled only when there is a technical relationship among the inventions involving one or more of the same or corresponding technical feature which define a contribution over the prior art.
